Raw76 Grain/Gluten Free is formulated using 100% raw, unprocessed ingredients with no preservatives and a natural balance of meat and vegetable matter.

The meat in Raw76 is high quality and low fat and mixed with a natural balanced ratio of Dr Bruce's Complete Mix Grain/Gluten Free, which is a blended mix that mimics the gut content of a prey animal. It provides a balance of critical vitamins, minerals and amino acids to create a fully balanced, nutritionally complete every day dog food. It includes all 76 macro and micro nutrients required for optimum health.

This grain, gluten and preservative free formulation is ideal for dogs and puppies with selective skin allergies, sensitive stomachs and specific grain or gluten related illnesses. It reduces chances of skin reactions, gut and ear infections.

The balanced ingredients and low carbohydrates help to correct underlying intestinal and digestion problems therefore supporting irritable bowels and sensitive stomachs.

No gluten and low carb raw diets also support management of dogs with diabetes, early stage renal failure and struvite crystals. It particularly benefits susceptible breeds such as German Shepherds, Staffordshire Bull Terriers and West Highland White Terriers.

		Linolenic (Omega 3)	1600*(59041)

Feed to target weight *Dry matter

Feed appropriately sized raw bones twice a week

Raw - It just makes sense!

Dogs and cats are not designed or equipped to properly digest and absorb cooked food, as we humans are. They have been evolving on this planet for millions of years eating fresh raw food. Their mouths, teeth, stomach, intestines, organs and enzymes, are all evolved to chew, process, digest and absorb raw food.

The ingredients of Complete Mix are air dried to prevent any thermal damage to proteins, vitamins and enzymes. The ingredients are formulated in accordance with the principals of raw food.

Avoid Modern Diseases

There is a growing stockpile of scientific evidence that links the long term consumption of cooked commercial pet foods, to the development of a vast array of common illnesses and degenerative diseases. Skin allergies, dermatitis, stomach sensitivities, teeth and gum disease, arthritis, renal failure, ear infections, obesity, reproductive failure and anal gland blockage can all be linked to improper nutrition.

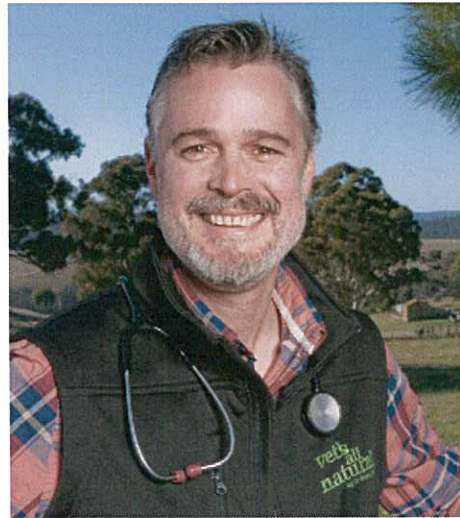

Cofeeding Fresh with Dry

Although we believe that feeding a 100% raw balanced fresh meat diet is best diet for dogs and cats, for those that choose to feed some dry, Raw76 Grain/Gluten Free allows dog owners to introduce a grain free fresh balanced food to complement a grain free dry food, and have peace of mind that they are not feeding grains. Having a raw grain free meat option also allows dog lovers to introduce fresh meat into their dog's diet. The more balance fresh meat the better!

"In my clinic I use raw balanced, low carbohydrate, gluten free diets to support dogs with gluten allergies, ear infections, diabetes, struvite crystals, irritable bowel disease, (sensitive stomach, digestive issues), early stage renal failure and cancer and the results have been excellent."
